

WHAT TO KNOW BEFORE YOU BUY

As more businesses move away from traditional on-premise data centers and embrace hybrid or cloud-based architectures, having reliable, real-time data integration becomes more important than ever. That's where Stelo Data Replicator comes in. When deployed in Google Cloud, Stelo offers a powerful, low-impact way to stream and ingest operational data into your Google Cloud Platform (GCP) perfect for analytics, reporting, or modernization efforts.

With flexible data control, minimal admin overhead, and deep integration into the GCP ecosystem, Stelo makes it easier to handle complex data movement and since it's vendor-agnostic with a scalable licensing model, it's built to grow with you, no matter how your data landscape evolves.

Stelo in GCP is a powerful, future-ready data environment that helps businesses stay agile, secure, and achieve real strategic impact.

STREAMLINED DEPLOYMENT AND PROCUREMENT

When deployed through the Google Cloud Marketplace, Stelo uses a straightforward per vCPU per hour pricing model. Billing is processed directly through your existing Google Cloud billing account, with usage charges automatically integrated into your regular Google Cloud invoice. This transparent, consumption-based pricing updates in real-time as your usage scales, providing predictable costs aligned with your actual resource consumption.

Stelo in GCP also offers flexible month-to-month billing that can be purchased directly through Google Cloud Marketplace to help optimize costs.

Stelo's flexible licensing options provide an affordable replication solution, especially when compared to other enterprise-level replication products.

A single instance can support multiple sources and destinations without additional licensing. The Stelo license model is independent of the number of cores of either the source or destination- so you only pay for the capacity required to support the transaction volume. You can seamlessly upgrade through Google Cloud Marketplace as requirements evolve, with dynamic scaling support without service interruption.

For deploying Stelo on Google Cloud Marketplace we recommend using:

- n2d-highmem machine types or better for production deployments.

STELO DELIVERS

- **Seamless Scalability:** Access rapid, flexible deployment models to scale as your demands grow.
- **Real-Time Data Reliability:** Eliminate lagging and inaccurate batch reporting to provide immediate visibility.
- **Fast, Efficient Process:** Achieve high data delivery rates, and liberate your mission-critical IT systems.
- **Avoid Connectivity Failures:** Our software checkpoints data to pause and resume without needing to re-baseline.
- **Direct Connection into Google Big Query:** Stelo has been tested and approved by Google Cloud engineering to ensure seamless, high-performance integration.

SUPPORT

Mission critical support you can count on to keep your systems running and data available.

- Expert Installation and configuration assistance gets your data flowing in minutes
- Extensive diagnostic expertise and support for related systems
- Supported by experts who know your system, not generalists who may not understand data replication
